A/C Not keeping you Cool

- With summer upon us, the Maintenance Dept. asks that all the members watch the hose at the bottom of their furnace/air conditioner. Water should be dripping out of the end of the hose if your A/C is operating. If you observe that there is no water dripping from the hose, turn off your A/C and call in a work order right away.
- Air flow is necessary for your Furnace/Air Conditioner to operate efficiently. Make sure there is an open space (suggest 4 feet) around your furnace and that your filter is changed in a timely manner.
- If you observe your outside unit is frozen and your A/C is blowing warm air, call in a work order and turn off the A/C so it will thaw and work can be done on it.
- Always keep a path open to the Electrical Box and the Water Shut Off in your basement.

Condolences

Go out to Karen Coleman (3957 at the loss of her brother, and our member and neighbor, Rodney Coleman (5824) Our condolences to the family.
